

The same assistant, from your desk to your pocket.

Native apps for Windows, macOS, Linux and Android (iOS coming soon) — connected to your organization's governed account, with the same history on every screen.

WHAT YOU CAN DO

- ✓ **Continuity across devices.** A conversation started at your desk continues on your phone, word for word.
- ✓ **Native Office files.** On desktop, Word, Excel, PowerPoint and PDF open directly inside the app.
- ✓ **Computer control.** Let the assistant run commands on your machine, off by default.
- ✓ **Voice dictation.** A mic button transcribes speech straight into the message.
- ✓ **The full platform.** Chat, assistants, documents and automation — nothing is stripped down on mobile.
- ✓ **No-admin install.** Windows and macOS install without admin rights; on Linux, so does the portable AppImage.

HOW IT WORKS

- 1 Hilo Tech deploys your instance.**
Cloud or managed private hosting — you install no server.
- 2 Your team installs the app.**
The Android app supplied by Hilo Tech, or a no-admin installer for desktop.
- 3 One sign-in.**
The same login as the web app, with the same governance.
- 4 The thread follows you.**
Every device shows the same history, updated in real time.

- Full continuity across devices
- Complete app, never a light version
- Optional computer control
- Installed and operated by Hilo Tech

✓ Every app signs in to your governed instance — same access, same rules, on every device.
