

Workflows that work even when you're not.

A no-code editor with triggers, connectors and AI in the middle of the flow — plus scheduled tasks for the simplest use case.

WHAT YOU CAN DO

- ✓ **No-code flows.** Triggers, conditions and actions come together by drag-and-drop.
- ✓ **AI in the middle of the flow.** AI chat, classification, research, image, voice, music, video — in one step.
- ✓ **Five triggers.** Manual, schedule, webhook, app event or chat tool.
- ✓ **Scheduled tasks.** A message, a schedule, a destination — no full flow to build.
- ✓ **Full run history.** Status, duration and trigger for every run, failures included.
- ✓ **n8n import and export.** Import an existing flow or export your own.

HOW IT WORKS

- 1 Choose a trigger**
Schedule, webhook, event or manual.
- 2 Assemble the steps**
Connectors, logic and AI, in the node editor.
- 3 Test, then turn it on**
One step at a time, on real cases.
- 4 Track the history**
Status and duration for every run, anytime.

- AI native to the flow
- Scheduled tasks included
- End-to-end governance
- Installed and operated by Hilo Tech

✓ Every automation stays inside your governed workspace — same models, same budgets, same audit trail as the rest of HiloIntelligence.

See automation in action.
