

From brief to .pptx file, in minutes.

Describe the topic and get a real, structured, editable PowerPoint presentation.
Add process diagrams and conditional forms — three creation tools, one space.

WHAT YOU CAN DO

- ✓ **AI-generated presentations.** A plain-language brief becomes a written outline and content, image slots ready.
- ✓ **Real .pptx files.** The result opens unchanged in PowerPoint and stays editable everywhere.
- ✓ **Built-in slide editor.** Fine-tune text, fill the images, insert a chart — slide by slide.
- ✓ **Visual diagram editor.** Shapes, connectors and swimlanes — import from Mermaid, JSON or Visio.
- ✓ **Conditional forms.** A question tree filled from the composer: your answers become the brief the AI receives.
- ✓ **Company templates.** Keep branding consistent from one presentation to the next.

HOW IT WORKS

- 1 Describe the need**
A brief, a flow or a form, in plain language.
- 2 AI structures the result**
Outline, diagram or question tree, generated in seconds.
- 3 You fine-tune it**
Edit in the built-in editor, no tool switch needed.
- 4 The result is ready**
An editable .pptx, an exportable diagram, or a structured brief ready to send.

- A real .pptx file, not a preview
- Three tools, one space
- Native branching forms
- Installed and operated by Hilo Tech

✓ Your presentations, diagrams and forms stay inside your governed workspace — operated by Hilo Tech.
