

Six editors, one space. This is where your documents get written.

Documentation, text, spreadsheet, presentation, diagram and design: six types created from the same menu, edited by several people in real time, with an AI that works inside the page.

WHAT YOU CAN DO

- ✓ **Six native editors.** Documentation, text, spreadsheet, presentation, diagram, design — one menu.
- ✓ **Real-time co-editing.** Presence shown everywhere, named cursors in the text editors.
- ✓ **AI rewriting in the page.** Reformulate, grammar, shorten, expand, translate or free instruction, in six tones.
- ✓ **Rewriting: nothing lands without you.** The replaced text is shown beside the proposed text before it is inserted.
- ✓ **Company templates.** The layout is locked; only the fields to fill in are open.
- ✓ **Versions and sharing.** 50 versions kept on the text side, compared word by word in the word processor; share as view, comment or edit.

HOW IT WORKS

- 1 Create the document**
Blank page, one of the six shipped text templates, or a company template.
- 2 Write together**
Content syncs live; concurrent edits merge instead of overwriting.
- 3 Ask the AI**
Highlight a passage and pick the action and tone — the result is proposed.
- 4 Version and share**
Automatic saving, restorable versions, sharing person by person.

- Six editors inside the platform
- The AI writes in the document
- Office import and export
- Installed and operated by Hilo Tech

✓ Your documents stay in your governed workspace — per-person sharing, an internal link limited to your organization, an optional read-only external link with password and expiry, operated by Hilo Tech.
