

Control, proven — not just promised.

Roles, groups, per-model and per-feature access, a read-only audit log and compliance monitoring built for Law 25 / GDPR — governance is HiloIntelligence's architecture, not an option.

WHAT YOU CAN DO

- ✓ **Roles, groups and managers.** Administration follows your org chart; groups stay in administrators' hands.
- ✓ **Per-model access.** Public, admin-only, a selection of users and groups, or "everyone except".
- ✓ **Per-feature access.** The same fine-grained control covers 35 features, with a "hidden" mode on top.
- ✓ **Licenses and budgets.** Seats per plan, a default budget, consumption kept under watch.
- ✓ **Read-only audit log.** The audit API serves reads only: no route writes, edits or erases a row.
- ✓ **Compliance monitoring.** Passwords, secrets and personal information caught in the messages people type.

HOW IT WORKS

- 1**
A request comes in
A user sends a message to a model from the platform.
- 2**
Six control gates
Authentication, approved account, license, conversation access, budget, model access — in that order.
- 3**
Allowed or refused
It passes, or it stops cold at the first gate policy closes.
- 4**
Logged to the record
Every action taken is timestamped and attributed; a refusal stops at a 403.

- Fine-grained control, model by model

- Read-only audit log

- Built for Law 25 and GDPR

- Installed and operated by Hilo Tech

- ✓ Logical isolation on HiloIntelligence Cloud, or a dedicated instance under private hosting managed by Hilo Tech, based on your data residency requirements.
