

Images, video, voice and music — generated in your space.

Image generation and retouching, AI-assisted video, multi-voice speech synthesis, generated music and file transcription — all governed like the rest of the platform.

WHAT YOU CAN DO

- ✓ **Image generation.** Several models to choose from, up to four variants in one click.
- ✓ **Edit by instruction.** Retouch an existing image without starting over.
- ✓ **AI-assisted video.** A few words become a detailed video prompt.
- ✓ **Background rendering.** Keep working while the video generates.
- ✓ **Voice and music.** Dozens of natural voices, or a track composed from a description.
- ✓ **Transcription of your files.** In the Meetings tab: audio or video up to 8 h, split, transcribed, handed back as text.

HOW IT WORKS

- 1 Describe what you need**
An image, a video, a text to turn into voice.
- 2 The AI generates**
Governed models: one image, four variants or a full render.
- 3 You refine**
Edit, regenerate, or switch voices in one click.
- 4 Everything stays in your library**
Private by default: shared only when you decide to.

- Three studios, one workspace

- Governed and logged models

- Background video rendering

- Installed and operated by Hilo Tech

✓ Every generation is logged and governed by your administrator — like the rest of the platform.
